

VisionVPM Version 340

Highlights

❖ **Lab Result Viewing enhancements**

There is now a visual indicator of where lab results are relative to the normal range. This should assist with identification of results outside the normal range.

❖ **Client and Patient Activity Report**

This shows the number of new active clients, newly inactive clients, new patients, recovered clients, lost clients etc for any monthly date range.

❖ **Supplier Letter and Mail Merge Facility**

Now you can generate letters for your suppliers by merging from VisionVPM. This will save time with address labels or notifications about any clinic changes that might affect your suppliers.

❖ **Stock Reordering based on % sales**

Set up your automatic stock reordering based on a percentage of previous stock to help you keep stock on hand without over-ordering.

❖ **Header only GL accounts**

General Ledger accounts which cannot have transactions allocated to them. These function purely as headers to facilitate reporting.

This is the structure people are used to in MYOB and some other GL programs.

❖ **Option to display drugs and reminders on clinical record window**

Increases the amount of readily viewable information from the clinical record, making it quicker to check reminder status and what is prescribed.

❖ **Increased SMS texting functionality**

You can now text from the hospital window and for specific patients on from the client details window.

❖ **New Equine Pet Name field**

Much requested – for recording horse's stable names in addition to their racing names. Searchable.

❖ **More data and Marketing Search options**

All patients also now have first and last visit dates displayed with marketing searches available.

❖ **Appointment Improvements**

One step arrival, weighing and microchip check facility. Search for previous appointments from the Animal Details window.
